Forecast for Monday 04 Nov 2024

Weather: Cloudy but largely remaining dry, with a few spots of drizzle across some southeast or eastern facing slopes. Local cloud breaks developing in the west, with some higher summits also lying above the cloud layer. Rather mild.

Chance of cloud-free hill tops above 600m: 20%, becoming around 60% in the west in the afternoon.

Low cloud and visibility: Extensive cloud with tops of 800-1000m and bases around 400m. Some lower cloud bases likely over southern and eastern hills. Cloud bases rising to lie around 500m, perhaps occasional above 600-750m at times in the west, especially through the afternoon where cloud breaks could develop widely. Cloud lowering during the evening, with a few patches of valley fog forming where skies remain clearer overnight. Visibility good or very good away from cloud, otherwise falling moderate to poor in any drizzle and very poor in late fog.

Forecast for Tuesday 05 Nov 2024

Weather: Remaining cloudy for most with the best of any bright or sunny spells primarily in the west. A few spots of drizzle likely at times, mainly across eastern hills. Any valley mist or fog patches clearing around mid-morning, but may reform at night where flow falls slack.

Maximum wind: Southeast around 10-15mph.

Chance of cloud-free hill tops 600m: 30%, rising to around 60%.

Low cloud and visibility: Periods of extensive cloud with tops around 800m and bases 450-600m. Some lower cloud bases likely for southeastern facing slopes. Taller summits are likely to sit above the cloud layer, particularly during the afternoon, even if routes to the peaks are shrouded by cloud. Visibility good, but poor in drizzle. Very poor in mist or fog.

Temperature: **Valleys:** Plus 5 or 6 Celsius rising to plus 14 Celsius
At 600m: Plus 5 or 6 Celsius, perhaps 9 Celsius later.
Freezing level: Above the summits
